

Your phone could make you very sick

Dirty money and mobile phones pose a great risk to your health, researchers have warned. Money, especially low denomination currencies, the scientists say, are causing more diarrheal diseases among Kenyans who are being exposed to food borne germs in hotels and other food joints. The study carried, out among 395 food handlers in 15 different types of outlets in Nairobi County, by Jomo Kenyatta University of Agriculture and Technology (JKUAT), Kenya Medical Research Institute (Kemri), and US Army Medical Research Unit — Kenya show that because they are rarely cleaned, money and mobile phones act as reservoirs of germs that cause food poisoning. <https://www.nation.co.ke/news/Your-phone-could-make-you-very-sick/1056-5132756-120oyk>
